COMPRESSION

ARM COMPRESSION SLEEVE

251Z

S, M, L, XL, XXL

FEATURE

Target Compression System encompasses from the elbow joint and extends to the forearm muscles to enhance its surrounding proprioception. An extensive compression design not only maintains elbow joint stability, but also enhances arm muscle efficiency, which increases precision and coordination of the arm, thereby extending the limits of endurance in throwing, swinging, and spiking performance.

ANKLE SUPPORT COMPRESSION SOCKS

204Z

S, M, L, XL

FEATURE

The Target Compression System is designed on the theoretical basis of human biomechanics that focuses on specific muscles and joints. It rotates from the sole of the foot to the lateral side of the ankle, and further extends to the calf muscles. A wide range of compression not only provides extensive support to the arch to strengthen coordination and movement control of the ankle, thereby enhancing stability during lateral movement and preventing injuries caused by excessive ankle rotation, but also promotes calf muscle contractile efficiency. Hence, allowing greater fluency in sprinting and jumping.

CORE LEVEL

Using high tensile elastic materials, LP SUPPORT core level products offer support and compression for sports injury prevention and body heat maintenance. Simple strap may be added to enhance adjustability or stability of the brace.

ADVANCED LEVEL

Use LP advanced level supports for extra protection to injured area and to help shorten recovery time. Pads, straps and specific materials are featured for pain relief, or body alignment following injury. Special design of advanced level supports may also improve sport performance and assist joint movement.

PROFESSIONAL LEVEL

Use professional level LP products for maximum support or stability. Extra rigid stays, adjustable straps or specific pads may be included to help effectively correct joint alignment, to absorb sudden impact, limit joint movement during rehabilitation, and prevent re-injury.

KNEE SUPPORT (CLOSED PATELLA)

Provides comfortable pressure and maximum heat retention on the knee joint. Helpful for postoperative knee problems, strains, arthritis and protection against abrasions.

Core Advanced Professional

769

ONE SIZE FITS ALL

PATELLA BRACE

Applies pressure on the patellar tendon to assist with correct tracking. Provides symptomatic relief of pain and inflammation associated with overuse injuries such as Patellofemoral syndrome, jumper's knee, and Osgood Schlatter.

Core Advanced Professional
